

Playmaker Sports Analytics

Discord Bot — High-Level User Guide

Members • Operators • Staff | October 2026

Who	What this guide covers
Everyone	Tailing official plays, personal stats, sharing stats, sports stats lookups.
Paid / trial members	The Member Bet Vault, VIP CHAT sharing, paid stats commands.
Operators	Posting official plays, settling, editing and regrading them.
Staff / owners	Tracker, recaps, auto-settle, testing and diagnostics.

1. How the server fits together

- **Official plays channel** — operators post their bet slips here. These plays make up the official tracker.
- **Member Bet Vault** — a separate channel where paid/trial members log their own bets. Vault bets never affect the official tracker.
- **Free chat / VIP chat** — where members can share their stats cards.
- **Confirmation channel** — staff-only: play copies, auto-settle suggestions and bot alerts.
- **Results channel** — weekly and monthly recaps.

Membership is managed by **Whop**. Paid and trial members receive the HIGHROLLER role automatically; free members are ROOKIE. Use `/membership_status` to privately check your own access.

2. For members

Tailing a play

Every official play appears as a single bot message with the play card, the operator's slip and a **Tail** button. Tap **Tail** to follow the play (tap again to un-tail). The button shows how many members are tailing. Tails close once the play is settled.

Your stats — `/mystats`

Shows you privately: your official-play record (if you are an operator), the plays you tailed, and your vault record. Below the card is a share button:

- **HIGHROLLER (paid or trial)** — “Share to VIP CHAT”, tags @HIGHROLLER.
- **Everyone else** — “Share to FREE CHAT”, tags @ROOKIE.
- The card posts under your name and avatar and the private copy disappears.

Leaderboards and stats lookups

Command	What it does
<code>/vault_leaderboard</code>	This month's top Member Vault records.
<code>/schedule</code>	Seven-day schedule for a sport/league (paid).
<code>/results</code>	Recent final scores (paid).
<code>/matchup</code>	Preview of an upcoming matchup (paid).
<code>/teamstats</code>	A team's recent form (paid).
<code>/gamestats</code>	Player stats for a current or upcoming game. Pick sport → league → game → player from lists; no IDs to type.
<code>/playerstats</code>	A player's current and previous season stats.
<code>/rankings, /summary</code>	Team ranking summary and the daily team summary.
<code>/membership_status</code>	Privately check your paid/trial vault eligibility.

Member Bet Vault (paid and trial members)

1. Post **one photo** of your bet slip (JPEG/PNG/WebP, up to 10 MB, up to 10 legs) in the vault channel. You may add the units in the message text.
2. The bot saves a private copy, deletes your post and shows a processing card. Only you and moderators can view the extracted details.
3. Confirm the units, odds and matchup. Confirmed tickets are locked.
4. The public card shows the matchup, units and odds, with the selection hidden. Supported games are graded automatically; moderators settle the rest.

Text-only posts, links, GIFs and PDFs are rejected. Rejection notices appear as a short @mention in the channel that deletes itself after 60 seconds. The bot never DMs members.

3. For operators

Only members with the **OPERATOR** role count toward the official tracker. Slips posted in the official channel by anyone else are ignored.

Posting an official play

1. Post your bet slip **image** (with an optional caption) in the official plays channel.
2. The bot reads the slip and shows a **review** card. Check the legs, units and odds, then edit them if needed.
3. Press **Confirm**. The bot replaces your post with one official message (your name/avatar, caption, slip image and the Tail button) and records the play.
4. You get a private confirmation with an **Edit** option.

No image? Use **/play** to enter a play manually.

Settling plays

React on the official play message, or use the commands below:

Reaction	Result
Green check mark	WIN
Red X	LOSS
P button (parking)	VOID / push
Half moon	PARTIAL

Command	What it does
/settle	Pick an open (or regraded) play from a list and set its result.
/regrade	Change the result of a play settled in the last 2 days.
/unsettle	Reopen a play settled in the last 7 days.
/edit_play	Change units, team or legs of an open play; the card refreshes.

Auto-settle suggestions

Every 15 minutes the bot checks final scores for full-game moneyline, spread and total legs (NFL, college football, basketball, baseball, hockey). It posts a “looks like a WIN/LOSS/VOID” card in the confirmation

channel. **Nothing settles until staff press Confirm**; Dismiss ignores it. Props and unsupported games are settled manually.

4. For staff and owners

Command / feature	What it does
Unit tracker	Unit Summary and Top Playmakers embeds, refreshed hourly. They show units and records per operator.
/update_tracker	Refresh the tracker immediately (officials/moderators).
/tracker_start	Count only plays settled on or after a date (<i>clear</i> resets, <i>show</i> displays it).
Recaps	Posted automatically on Mondays (weekly) and the 1st (monthly) at 10:00 AM ET in the results channel.
/recap	Preview a weekly/monthly recap privately, or post it.
/test	Parse a slip image without recording it, or run system diagnostics.
/testing	Turn the image test channel on or off; while on, plays post to the test channel.
Staff alerts	Image-reading, tracker, recap and auto-settle failures post to the confirmation channel (at most once per 10 minutes per type).

5. Quick tips

- Clear, uncropped slip screenshots read best. If the reader gets something wrong, fix it on the review card before confirming.
- Settle each play once. Use /regrade or /unsettle to correct mistakes instead of adding extra reactions.
- Members can tail before kickoff; tails lock once the play is settled.
- Private bot replies (“Only you can see this”) can be dismissed safely.
